## (54) DRIVING METHOD OF PLASMA DISPLAY PANEL

(57)Abstract:

PROBLEM TO BE SOLVED: To realize a high quality and stable display by effectively using a frame interval. SOLUTION: Temperature of the panel surface corresponding to a cell is measured and pulse widths W of driving voltage pulses Py and Pa are varied in accordance with the temperature variation. When the measured temperature is relatively low, a pulse width WL is made longer. When the measured temperature is there is high, a pulse width WH is made shorter.
